

Gearlever gaiter base ring

Material - leather cloth
- colour to suit main
upholstery

1. Make top piece first and form into cone
2. Stitch cone to base ring
3. When placed in the car, seam of cone should run **BEHIND** the gear lever
4. Holes can then be made in the base ring to match screw holes in gear box top cover (threaded plates are located welded to underside of gear box top cover)
5. Gaiter is held in place by steel plate ring
6. Screw heads and ring should be painted gloss black

NB. This is **NOT** a template, but a measured drawing. Do not use this to draw around but rather as an indication for measurements. Picture for illustration purposes only.
