

# 1949 MG Ya Saloon Trunk Floor Covering Taken from Y2866

Refer to Supplementary drawing for details of this area

Drawing measurements taken from the original Trunk Floor covering of Y2866  
 The material which is only approx .060 inch thick is very similar to the sound deadening material usually found under the rear seat cushion except that it has a smoother shiny black surface on the top side.

The rear is held down by the metal edge at the trunk opening and the side edges are held down by side panels  
 The edge to the front of the vehicle (behind the rear seat back rest) is held down by a timber strip.  
 (See details below)

Cross section of timber hold down strip  
 Runs the full width of the Trunk 1022 mm long
